

Programs Offered

What are the current incentive programs offered by ActOnEnergy®?

Each incentive program has its own application form, eligibility criteria (customer eligibility and project eligibility), and incentive calculations. The table below lists the different measures and which applications (or combination of applications) could be used to apply for incentives for those measures. Any type of business may use any of the applications listed below.

Standard Applications									
Measure*	Lighting	HVAC./Water Heater	VFD	Commercial Kitchens	Lodging	Grocery	Agriculture	Steam Trap	Leak Survey and Repair
Interior Lighting and controls	■			■					
Exterior Lighting	■						■		
Refrigerated case lighting and controls						■			
Refrigeration/Freezing				■		■			
EC motors for refrigeration						■			
Vending machines and ice machines					■	■			
Refrigeration tune-up				■		■			
AC replacement		■			■				
Gas heat replacement		■							
AC tune-up		■			■				
Gas boiler/furnace tune-up		■			■				
Variable frequency drive for HVAC		■							
Variable frequency drive for motors			■						
Water heater – gas or electric		■			■		■		
Commercial kitchen equipment				■					
Green nozzle				■					
Guest Room Energy Management (for HVAC)					■				
Agricultural equipment							■		
Leak Survey/Repair/Replacement (HVAC or Process Steam)**								■	
Compressed Air Survey/Repair**									■

*Not all measures (for a particular type) will be listed in each program – for example, not all interior lighting measures will be listed in the Lodging Program Application. Please refer to the core application (in this case, Standard Lighting) to see if the measure you are looking for is listed there. If not, it may be eligible under the Custom Program.

**Compressed air projects may be eligible for incentives under the Retro-commissioning program.

<u>Non-Standard Applications</u>
In addition to the “Standard” programs listed above, there are also a number of other programs offered by ActOnEnergy.
The Competitive Large Project Incentive (CLPI) program is tailored to extremely large companies that are interested in completing a significant number of energy-efficient upgrades. The incentive limits have been increased and completion requirements relaxed. If you are interested in more information about this limited-time program, please contact us at 1.866.800.0747.
The Staffing Grant incentive provides assistance to companies that do not have the time, staff or revenue to commit to energy-efficiency projects. The staffing grant provides money to fund a project manager to identify and manage these opportunities to completion. Contact us if you would like more details 1.866.800.0747.
The New Construction program provides incentive money for energy-efficient lighting in new construction projects, remodeling jobs, and additions to existing buildings. (Other energy-efficient equipment in your new construction project may be eligible for incentive money through the Custom program.) New equipment must exceed the requirements set forth in the applicable energy codes. The New Construction application will be available in Fall 2011; in the meantime, please use the Custom Application for new construction measures.
The Retro-commissioning Compressed Air program includes incentives toward the payment of the initial survey of your compressed-air system. Improvements that are recommended that have a payback period of a year or more might be eligible for incentives through the Custom Program.
The Retro-commissioning Healthcare program includes incentives toward the payment of the initial survey of your healthcare facility. Improvements that are recommended that have a payback period of a year or more might be eligible for incentives through the Custom Program.
The Custom program is designed to accommodate electric or gas energy-efficiency measures that are not included in the Standard Program Applications. Please call us to discuss your project, the eligibility criteria, and how to calculate the incentive amount.
The On-line Store is available for all Ameren Illinois electric customers. This store sells CFLs, LED exit signs, and other energy-efficient products at a substantially reduced rate.
The Multi-Family Properties program (multiple occupancy building with three or more customers who each qualify for the Residential Ameren Illinois Delivery Service Rate DS-1) may be eligible for some free upgrades to the units, and incentives for improvements to the common areas. Please contact the ActOnEnergy Residential Program for details, toll-free at 1.866.838.6918. If the utility bill for the property is set up as a business account then you may be eligible for incentives through the business program.
