E-Smart™

PROGRAMMABLE THERMOSTAT

Internet-Enabled Convenience
and a Higher Degree of Savings

The Ameren Illinois Utilities—AmerenCIPS, AmerenCILCO
and AmerenIP

E-Smart™

PROGRAMMABLE THERMOSTAT

As an Ameren Illinois Utilities customer you may be eligible to participate in the Act On Energy® E-Smart Programmable Thermostat Program.

By participating:

- You use less energy and spend less money on your monthly energy bill.
- You help reduce peak power demands, resulting in a cleaner environment and reduced need for construction of new power plants.
- You get a FREE programmable thermostat and FREE professional installation—**a value of more than \$250.**

How does the program help me use less energy?

You program your state-of-the-art thermostat so that it automatically sets your home's temperature based on your family's schedule. Special daytime, nighttime and weekend settings ensure you are always comfortable yet saving money when heating and cooling is not needed.

Are these special settings easy to program?

Unlike other programmable thermostats you can change your thermostat settings from a simple, easy-to-use Web site through any Internet connection.

How does the program help Ameren Illinois Utilities reduce peak power demands?

The program works by "cycling" your air conditioning unit—wirelessly turning the air conditioner off for short intervals during times of high overall demand for electricity. The cycling is limited to 12 occurrences during the summer season, weekdays only, from 1–5 pm.

How will cycling affect the comfort level of my home?

The impact on comfort is usually minimal during a cycling event since the thermostat is designed to make small temperature adjustments over time.

How do I adjust my thermostat on the Internet?

The same way you perform other Internet functions. After initial set-up you will log on to the Internet with a user name and password of your choosing. The control panel is designed to be quick and easy to use, with color-coded menus for each type of setting: Heat Mode, Cool Mode and Vacation Mode.

Do I have to get on the Internet every time I want to adjust my thermostat?

The thermostat also works manually. You can adjust and program your new thermostat right at the wall with the simple, easy-to-use digital display.

AIU-DR-BRO-01.22.10

How does Ameren Illinois Utilities cycle my air conditioner?

Your thermostat receives signals from a wireless paging system during a cycling event. This, in turn, causes your central air conditioning unit to turn off and on to gradually adjust the temperature of your home. You'll know when a cycling event is taking place as the LED light on the thermostat will turn green and the word "SAVE" will appear on the display because you will be saving energy and saving money.

Is the thermostat compatible with all heating and cooling equipment?

No. There are some systems or circumstances that are incompatible with the thermostat system: Digital control systems including the Carrier Infinity® and Bryant Evolution® and multi-zone systems using 485 protocol; dual fuel heat pumps with gas/oil backup; electric baseboard heat; and zone systems that remove power from the thermostat wire. The Program is not available in areas that cannot receive the paging signal.

How do I participate?

1. You MUST have central air conditioning or an electric heat pump and be an electric customer of the Ameren Illinois Utilities (AmerenCIPS, AmerenCILCO or AmerenIP).
2. Simply call our toll-free number 866-838-6918 weekdays from 8am - 4:30pm to schedule your free installation.
3. Read and sign the enclosed Participation Application and give it to the trained HVAC professional who installs your thermostat.
